Solutions for Science and Industry

0.7 nm  
XEIA

1.0 nm  
FERA

<15nm 2µA

new electron column  
Triglav™

20+  
Accessories

### Plasma FIB-SEM

- Up to 50X faster than Ga FIB
- Suited to large volume milling
- High ionisation rates suited to TOF-SIMS
- Suited to compound semiconductors, hard materials etc.

0.7 nm  
GAIA

1.5 nm  
LYRA

2.5nm 50nA

new electron column  
Triglav™

20+  
Accessories

### Ga FIB-SEM

- Ideal general purpose FIBs
- Optimised for high resolution at low currents
- Excellent platform for cryo-FIB
- Suited to sensitive materials e.g. biological samples

## FIB-SEM

- Excellent platform for 3D EDS/EBSD/Tomography
- Multitude of detectors including TOF-SIMS, CL, EBIC etc.
- Ultra-High Resolution (UHR) SEM column provides excellent image resolution at low voltages
- Large range of automated imaging modes
- UHV chambers available

## FEG-SEM

UHR SEM

BDT  
down to 50 eV

new electron column  
Triglav™

20+  
Accessories

### FEG-SEM

- Channelling, depth, wide field, field & resolution imaging modes available with one-click
- Various chamber sizes for different applications
- Easy to automate operation
- Optimised platform for CLEM and cryo-SEM
- Fastest and most accurate stages

0.7 nm  
MAIA

#### UHR

- Ultra-high resolution at low voltages
- Highest probe current of any UHR system
- Ideal for bio-applications

1.5 nm  
MIRA

#### Analytical

- Ultrafast image acquisition
- Excellent resolution at vacuum & pressure
- Highly versatile - suits many applications

## SEM

LaB<sub>6</sub>

W

20+  
Accessories

### Thermionic SEM [VEGA]

- Versatile and highly reliable
- High resolution imaging with W & LaB<sub>6</sub> emitter
- Suitable for high & variable vacuum operation
- Fully automated column set-up and alignment
- User friendly software suits novice operators

### Economical SEM [VEGA-SB]

- Full-featured SEM with fully-automated column
- Small footprint
- Low cost, comparable to bench top systems
- Excellent choice for beginners and training
- Up to 1,000,000X magnification
- Superior performance to benchtop SEMs

3 nm  
VEGA

**Thermo**  
SCIENTIFIC

## Microanalysis

### EDS [Ultrady & Compact Ultrady]

- Superior resolution at incredibly high collection rates
- New, comprehensive and feature-rich software
- Light element sensitivity down to Be
- The best solid angle detector on the market

### EBSD [QUASOR]

- Acquire EBSD, WDS & EDS spectra simultaneously
- Wide range of mapping display options e.g. Euler, HKL & UVW
- Phase and grain boundary maps
- Texture analysis and rapid pole figure interpretation

### WDS [MagnaRay]

- Unparalleled microanalysis results
- Automatically handles alignment, analysis settings & acquisition
- High sensitivity for trace elements
- Continuous spectrometer coverage over the entire spectral range

**delmic**

## Spectroscopic CL

### CL/SEM [SPARC]

- High performance cathodoluminescence detection system
- Future proof modular design
- Angle-resolved mode makes new types of research possible
- High precision, automated mirror alignment stage gives unprecedented photon yield and reliability
- Class-leading nanoscale spectroscopic information with SEM resolution

**kleindiek**  
nanotechnik

### Nanomanipulators

- Suited to SEM and optical microscopes
- Models for material and life sciences
- Simple to use/plug-and-play
- Precise manipulation at the nanoscale
- Robust and stable (drift 1nm/min)

### SuperFlat AFM for SEM

- Fast 3D images in your SEM
- Perform AFM *in situ* within your SEM
- Combine structural/topographical/force data
- Can be used in air or SEM

## In Situ TEM Platforms

**DENS**  
solutions

### Wildfire

Heating stage for thermal studies

Heating

### Lightning

Biasing and heating for controlled electrical/thermal studies

Biasing

### Climate

Gas & heating for high pressure gas studies at elevated temperatures

Gas

### Ocean

Liquid cell for studying materials and biologicals - static and flowing

Liquid

SPEX SamplePrep

## Pellet Press

### X-Press 3636

- Fully programmable automated operation
- Fast, accurate and consistent pressing for XRF, IR etc.
- Safety interlocks for operator protection

## Fragmentation

### Selfrag

- Selective fragmentation
- Smart alternative to crushing
- High voltage pulsed power technology
- Liberates morphologically intact minerals
- Allows control of target fraction size
- Suitable for breaking down composites
- Contamination and dust-free

SPEX SamplePrep

## Cryogenic Mill

### High Energy Mixer Mill

- Most advanced cryogenic grinding systems
- Suited to tough/temperature-sensitive samples
- High throughput/fully automated
- Ideal for polymers, composites, fibres etc.
- Various sizes to suit your applications

SPEX SamplePrep

## Ball Mill

### High Energy Ball Mill

- Highly efficient grinding motion
- Fast and effective grinding to analytical fineness
- Ideal for various samples, mechanical alloying, nanomilling etc.

Katanax  
A Spex SamplePrep Company

## Fusion Beads

### Automatic Fluxers

- Fully programmable
- Safety switch & interlock
- Single-phase mains power
- User-friendly, industrial grade touchscreen interface
- Chemically inert heating elements impervious to flux

**30**  
per  
hour

X-600

**15**  
per  
hour

X-300

FISCHIONE  
INSTRUMENTS

## Plasma Cleaners

- Simultaneously cleans samples, sample holders and mounts
- Enhances imaging and analytical results
- Removes contaminants keeping your EM clean
- No change to elemental composition or structural characteristics
- Suits most commercial TEM and SEM sample holders

## Pulverisers

### OM222 Ring Mill

- High performance system
- Samples loads up to 1500g
- Programmable run timer
- Safety switch and interlocks

FISCHIONE  
INSTRUMENTS

## TEM and SEM Sample Prep

- Perfect complement to FIBs
- Artefact-free milling
- Removes amorphisation and ion implantation
- Optimised ion sources for milling and polishing
- Precise control of milling parameters
- *In situ* imaging

## Ion Mills

Ultra-low  
energy ion  
milling  
**TEM**

1040

High & low  
energy  
milling  
**TEM**

1051

High & low  
energy  
milling  
**SEM**

1061

Ultra-low  
energy ion  
milling  
**TEM**

1080

**Thermo** SCIENTIFIC XPS+Auger

**K-Alpha+**

- Affordable & reliable with low running costs
- High-performance, low exposure X-ray sources
- Easy to operate
- High throughput
- Real-time hi-res sample visualisation
- Ion sources for all sample types
- Next generation electron optics & detectors
- MAGCIS ion cluster source

**ESCALAB 250Xi and Theta Probe**

- Spectroscopy with unrivalled sensitivity and resolution
- Fast parallel imaging, <3μm
- Real-time physical imaging
- Microfocussed monochromators for rapid analysis of small areas
- Thin film analysis and parallel ARXPS
- Depth profiling using ion source
- Optional field-emission AES & UPS

**nano photon** Raman

**RAMANview**  
**Wide Field Raman Scope**

- Map 800mm<sup>2</sup> without moving sample
- Spatial resolution to 2.5 μm
- No focusing required
- Up to 70mm Working distance
- Image rough and curved samples

**RAMANforce**  
**Laser Raman Microscope**

- Ultra-fast line laser scanning
- Stationary sample for ultimate stability
- Large samples & *in-situ* experiments
- <350nm spatial res guaranteed
- <100nm detectability guaranteed
- Highest spectroscopic performance
- Powerful and dedicated software

**FOV**  
**25.6**  
mm  
**Rview**

**Resolution**  
**3**  
μm  
**Rview**

**Full confocal**  
**microscope**  
**Rforce**

**Resolution**  
**350**  
nm  
**Rforce**

**Mapping**  
**500**  
μm<sup>2</sup>/min  
**Rforce**

**HIROX** 3D Microscopy

**Hirox Digital Zoom Microscopes**

- World's most advanced digital microscopes
- Highly automated operation
- 3D profiling, roughness & volumetric analysis
- Real time HD output 1920x1200 px @ 50fps
- High contrast with no digital noise
- All in-focus imaging
- Wide range of lenses to suit your application

**YXLON** X-ray CT

**FF35 CT**

- Large samples up to 300 x 500mm
- Large FOV with helical scanning
- 0.6μm resolution
- Fully automated acquisition
- Collision proof • Smart Touch operation

**Rigaku** X-ray CT

**nano3DX**

- True X-ray microscopy
- Relatively large samples measured at high res
- Fast measurement speed
- High-power X-ray source
- Switchable anodes for optimal contrast
- 3300x3300x2500 voxels @ 0.6μm
- Stitching possible for larger samples

WDXRF

Supermini200

- World's only benchtop WDXRF
- WDXRF for EDXRF price
- 12 position auto-changer and spinner
- Superior light element performance
- User friendly software
- Same analytical tools as large WDXRFs
- Standardless analysis

X-ray Fluorescence

Primus Series

- Unmatched performance for light elements
- Tube above optics option – ideal for pressed powders
- Mapping and small sample analysis (<500µm)
- Precise vacuum pressure control
- Autoloader with cupless analysis
- Unique multilayered crystals to analyse Be, B, C, N and O

WDXRF

Simultix

- Multi-channel simultaneous WDXRF
- Up to 42 channels available
- Tube below for safe pressed powder operation
- Advanced synthetic curved crystals
- Optional light and heavy element goniometer

WDXRF

Handheld XRF

X-Series

- Latest tube and detector technology
- Providing the fastest and most precise analyses
- Exceptional count rates
- Lightweight ergonomic design
- Dual shield detector technology prevents against accidental damage
- Android operating system with vibrant display
- Built-in camera for precise aiming and recording
- Wifi and Bluetooth connectivity

# X-ray Diffraction

World's most versatile diffractometer

XRD

## SmartLab

- Class leading accuracy and versatility
- High power 9kW or 3kW
- Intelligent Guidance software
- Patented in-plane arm for thin film analysis
- HyPix 3000 HPC detector (OD, 1D and 2D detection modes)
- Auto alignment
- Focussed & parallel beam geometries
- Vast range of attachments (detectors, sample changers, stages - heating, cooling, environmental, DSC, etc)

## Diffraction applications

- Phase identification
- Quantitative analysis
- Percent crystallinity
- Crystallite size/lattice strain analysis
- Precise lattice parameter determination
- Rietveld refinement

## Thin film modes

- Composition
- Orientation/texture
- Strain/stress
- Interface roughness
- Surface uniformity
- Perfection
- Relaxation
- Thickness
- Density

# Crystallography

## XtaLAB

- 3D structural analysis
- High speed HPC detectors
- Powerful, user-friendly CrysAlis Pro software

	mini II	SuperNova	Synergy-S/R
Speed	Fast	Faster	Fastest
Flexibility	Good	Better	Best
Dual wavelength	No	Yes	Yes
Telescopic 2θ arm	No	No	Yes

# Benchtop XRD

## Miniflex

- Most powerful benchtop XRD
- Publication quality data
- Suited to teaching, research & industry
- Combines speed and sensitivity
- Simple operation

## NANOPIX

- High-power point focus X-ray source
- OptiSAXS high-performance multilayer optics
- ClearPinhole high-performance pinhole slits
- HyPix-3000 high-performance 2D HPAD detector
- Superior small angle resolution ( $Q_{min}$  to  $0.02 \text{ nm}^{-1}$ )
- Variable samples to detector distance

## SAXS

# Handheld LIBS

## Z-Series

- Perfect for all alloy types including Al and Mg alloys
- Goes beyond XRF. Can measure Li, Be, B and C
- Argon purge gives faster and more accurate results
- Patented cleaning approach eliminates sample prep
- Smallest, lightest, fastest LIBS available
- Android operating system
- No radiation training required

## Integrable SPM

### SPECTRA

Raman  
TERS  
SNOM

### NTEGRA

- Modular platform
- Ultimate versatility
- Wide range of imaging modes
- Extending the capabilities of AFM
- HybriD mode for nanoscale quantitative stiffness mapping

### AURA

Controlled environment, low vacuum, magnetic field

### NANO IR

Infrared scattering  
SNOM

### THERMA

-30 to 300°C with low thermal drift

### PRIMA

Multifunctional SPM, hi-res, low noise

### VITA

Molecules and live specimens in liquid environments

## Revolutionary AFM/STM

### Titanium

- Fast/automated tip exchange using revolutionary cartridge
- Rock solid stability - World's lowest drift
- >30 SPM imaging modes
- Simultaneously measures 5 signals
- HybriD mode for nanomechanical and chemical mapping

## Nanofabrication

### NanoFrazor Explore

- Rapid prototyping of nanoscale devices
- Highly automated
- Unmatched precision
- Single step fabrication of 3D patterns
- Simultaneous AFM inspection
- No need for vacuum or high voltage supplies

## Educational AFM/STM

### Nanoeducator

- Affordable, robust and user-friendly
- Excellent scanner with closed loop control
- High resolution with low noise
- Research grade instrument, perfect for teaching
- Excellent alternative to EBL
